Back End Developer

February 2022 - February 2022 (1 month)

Surabaya, East Java, Indonesia

As a back-end developer, I am currently employed in this role and utilize the Go programming language. Although the company I work for is based in Indonesia, I am primarily focused on a specific project for Teavaro, a European company. Teavaro specializes in digital marketing and customer data management. This professional opportunity has allowed me to gain extensive knowledge and experience in working with a European company, providing valuable insights into their work culture and communication dynamics.

Being immersed in this environment, I have actively learned to understand and adapt to the European work culture, which significantly differs from the practices I am accustomed to. Moreover, I have had the privilege of engaging in intensive communication with the team based in London, as we have daily meetings at 4 p.m. to ensure regular collaboration and alignment. These interactions have not only honed my technical skills but have also enabled me to develop effective communication strategies while working with the London team members.

Overall, my experience as a back-end developer in this setting has extended beyond geographical boundaries. Despite being based in Indonesia, my involvement in a specific project for Teavaro, a European company, has allowed me to immerse myself in their work culture, gain valuable insights into European work practices, and engage in intensive communication with the London team. This rich professional experience has contributed to my growth as a developer, fostering cross-cultural understanding and effective collaboration in a multinational context.

Kipa Indonesia

Full Stack Developer

January 2020 - January 2020 (1 month)

Malang, East Java, Indonesia

Working closely with my esteemed senior, who possesses a distinguished name, proved to be an invaluable experience. As the owner of the company, he directly approached me to lend my expertise in the development of the system within this organization. With a focus on providing Point of Sale solutions, I dedicated myself to the project for a period of around 10 days, collaborating with the team to bring the project to fruition. This unique

opportunity allowed me to witness firsthand the intricacies of working with a respected industry figure and contributed significantly to my professional growth and understanding of system development in a Point of Sale context.

DoBuy Indonesia

Backend Developer

April 2019 - November 2019 (8 months)

Surabaya Area, East Java, Indonesia

As a back-end developer, I held the critical responsibility for ensuring the security, efficiency, and database architecture of this project. Being an e-commerce project, it presented a valuable opportunity for me to immerse myself in the intricacies of my role and expand my knowledge base. I diligently focused on safeguarding the project's integrity, implementing robust security measures, and optimizing the database structure for optimal performance. Through close collaboration with my senior colleagues, I gleaned invaluable insights and guidance, deepening my understanding of the back-end development realm. Their mentorship proved instrumental in honing my skills and refining my approach, instilling in me a comprehensive understanding of the multifaceted responsibilities associated with being a back-end developer in a real-world project context.

Nalar Naluri

1 year 3 months

Team Leader

July 2018 - April 2019 (10 months)

Jakarta, Jakarta, Indonesia

There was a significant moment in my professional journey where I was entrusted with the pivotal role of becoming the team leader for my esteemed colleagues. This milestone came with a profound responsibility as I took charge of overseeing project management, assuming the role of handling projects from initiation to completion. As the team leader, I actively engaged in fruitful discussions with my team members, diligently seeking the best solutions to address any bugs or technical issues that arose. Additionally, I devoted considerable thought to devising the most efficient strategies to deliver high-quality features to our valued clients.

I consider myself fortunate to have been surrounded by an exceptional team, whose remarkable skills and unwavering support made the execution of various projects significantly smoother and more successful. Their collective expertise and collaborative spirit not only eased the burden on my shoulders

but also fostered an environment of growth, productivity, and achievement. Together, we seamlessly navigated the complexities of project implementation, creating a synergy that yielded exceptional outcomes and solidified our reputation as a team dedicated to delivering excellence. The cohesive nature of our team, combined with our shared dedication to surpassing client expectations, played a vital role in the seamless completion of numerous projects. This experience reinforced my belief in the power of teamwork and highlighted the invaluable contributions that each member brings to the table.

Backend Programmer

February 2018 - June 2018 (5 months)

Greater Jakarta Area, Indonesia

As a backend programmer, I am employed in this office, marking my first professional experience in Jakarta. Working here has been an opportunity for tremendous growth as I have acquired extensive knowledge. I have been involved in diverse projects, including e-commerce ventures and the creation of landing pages. Additionally, I frequently handle server-related responsibilities such as website deployment. Notably, the clientele of this office encompasses both domestic and international entities.

One particular area where I demonstrate autonomy is in managing landing page projects. From the initial slicing of design files to the final deployment on the server, I undertake the entire process independently. This level of involvement has allowed me to enhance my skills and proficiency in handling end-to-end tasks.

the greatsoft

Software Programmer

June 2017 - January 2018 (8 months)

Surabaya Area, East Java, Indonesia

This is the first office where I worked, and it's where I became a junior programmer. I worked here for approximately 8 months, and most of the projects I handled were government-related. It was not uncommon for me to travel to different cities to visit relevant government agencies (SKPD) for system implementation alongside my senior.

My experience in this office was invaluable. I learned a lot about the programming world and how to handle projects involving the government sector. It wasn't just about developing technical skills; I also gained experience in communicating with various stakeholders. I often worked closely with my senior, who provided guidance and direction during the system implementation

process at SKPD. Throughout this period, I continuously grew and honed my skills as a young programmer.
